- Intel Xeon™ QuadCore 2.4Ghz, 4GB DDR2 800MHz, 1TB Internal Storage, 2x Gigabit Ethernet cards

HES (High Efficiency Server)

- 1U Rack Server
- Intel Xeon™ QuadCore 2.4Ghz, 4GB DDR3 1333MHz, 2TB Internal Storage, 2x Gigabit Ethernet cards

How it Works?

ThinkDigital PIGEON® is an enterprise-class and full standard compatible solution for email server and team work collaboration.

After starting-up your new **ThinkDigital PIGEON**®, you will have a multi-domain email server, shared calendars, shared tasks and subject aggregation on time streams. You will have a full Collaboration Suite working out-of-the box!

You can start a stream for each project (or lead) on your organization, and all the tasks, emails and calendar events will be aggregated into this stream. This will allow you to have a complete vision, in time, off all the occurrences on your collaboration work. Moreover this will keep you in sync, of all the transition subjects of all the projects that you and your team are involved.

ThinkDigital PIGEON® will also give you the possibility to create email groups or mailing list associated with time streams. With this new functionality you will never need to add multiple entities in copy each time you need to send an email to a project group. This will optimize your time but also keep your emails always tracked on the time streams.

Time streams will provide you the ability to navigate in time, from the very beginning of the project to the very last minute, seeing not only the sent emails but also all the tasks and calendar events regarding the stream subject.

Finally, the **ThinkDigital PIGEON**®, will protect your emails from virus with the integrated anti-virus subsystem, and also protect you from being flooded with unwanted emails with the anti-spam subsystem.

Best of all, the new **ThinkDigital PIGEON**® is excellent alternative for standard email servers, such as Microsoft Exchange and Scalix, that will reduce your TCO (Total Cost of Ownership) not only because the HES version is an unlimited licensed but also because it will give you the best collaboration tool you ever experienced, that will enhance dramatically your team work productivity.
